

"WE ARE PLEASED TO BE TAKING A MAJOR STEP INTO THE FUTURE WITH ZIMMER GROUP. THE UMBRELLA BRAND ZIMMER GROUP SYMBOLIZES OUTWARDLY WHAT WE HAVE ALREADY INTERNALIZED – THE UNITY OF PREVIOUSLY SEPARATE COMPANIES.

AS ZIMMER GROUP, OUR FAMILY-RUN ENTERPRISE CAN DELIVER EVEN GREATER VALUE AND SUPPORT FOR OUR CUSTOMERS.

NOW AND IN THE FUTURE. CONTINUING OUR INTERNATIONALIZATION, ENGAGING WITH ALL INDUSTRIES, AND SOLVING ALL TYPES OF DEVELOPMENT TASKS ARE SOME OF THE CHALLENGES THAT WE WILL OVERCOME AS THE KNOW-HOW FACTORY."

GÜNTHER ZIMMER, MARTIN ZIMMER AND ACHIM GAUSS

Managing Directors, from left to right

ZIMMER GROUP COMMITTED TO OUR CUSTOMERS

WE HAVE SUCCEEDED FOR YEARS BY OFFERING OUR CUSTOMERS INNOVATIVE AND INDIVIDUALIZED SOLUTIONS. ZIMMER HAS GROWN CONTINUOUSLY AND TODAY WE HAVE REACHED A NEW MILESTONE: THE ESTABLISHMENT OF THE KNOW-HOW FACTORY. IS THERE A SECRET TO OUR SUCCESS?

Foundation. Excellent products and services have always been the foundation of our company's growth. Zimmer is a source of ingenious solutions and important technical innovations. This is why customers with high expectations for technology frequently find their way to us. When things get tricky, Zimmer Group is in its best form.

Style. We have an interdisciplinary approach to everything we do, resulting in refined process solutions in six technology fields. This applies not just to development but to production. Zimmer Group serves all industries and stands ready to resolve even the most unique and highly individualized problems. Worldwide.

Motivation. Customer orientation is perhaps the most important factor of our success. We are a service provider in the complete sense of the word. With Zimmer Group, our customers have a single, centralized contact for all of their needs. We approach each customer's situation with a high level of competence and a broad range of possible solutions.

TECHNOLOGIES

HANDLING TECHNOLOGY

MORE THAN 30 YEARS OF EXPERIENCE AND INDUSTRY KNOWLEDGE: OUR PNEUMATIC, HYDRAULIC AND ELECTRICAL HANDLING COMPONENTS AND SYSTEMS ARE GLOBAL LEADERS.

Components. More than 2,000 standardized grippers, swivel units, robotic accessories and much more. We offer a complete selection of technologically superior products that are ready for rapid delivery.

Semi-standard. Our modular approach to design enables custom configurations and high rates of innovation for process automation.

DAMPING TECHNOLOGY

INDUSTRIAL DAMPING TECHNOLOGY AND SOFT CLOSE PRODUCTS EXEMPLIFY THE INNOVATION AND PIONEERING SPIRIT OF THE KNOW-HOW FACTORY.

Industrial damping technology.

Whether standard or customized solutions, our products stand for the highest cycle rates and maximum energy absorption with minimal space requirements.

Soft Close. Development and mass production of pneumatic and fluid dampers with extraordinary quality and rapid delivery.

OEM and direct. Whether they need components, returning mechanisms or complete production lines – we are the trusted partner of many prestigious customers.

LINEAR TECHNOLOGY

WE DEVELOP LINEAR COMPONENTS AND SYSTEMS THAT ARE INDIVIDUALLY ADAPTED TO OUR CUSTOMERS' NEEDS.

Clamping and braking elements.

We offer you more than 4,000 types for profiled and round rails as well as for a variety of guide systems from all manufacturers. It makes no difference whether you prefer manual, pneumatic, electric or hydraulic drive.

Flexibility. Our clamping and braking elements ensure that movable components such as Z-axes or machining tables maintain a fixed position and that machines and systems come to a stop as quickly as possible in an emergency.

PROCESS TECHNOLOGY

MAXIMUM EFFICIENCY IS ESSENTIAL FOR SYSTEMS AND COMPONENTS USED IN PROCESS TECHNOLOGY. HIGH-LEVEL CUSTOM SOLUTIONS ARE OUR TRADEMARK.

A rich reservoir of experience. Our know-how ranges from the development of materials, processes and tools through product design to production of series products.

Deep production capabilities. The Zimmer Group pairs these capabilities with flexibility, quality and precision, even when making custom products.

Series production. We manufacture demanding products out of metal (MIM), elastomers and plastics with flexibility and speed.

MACHINE TECHNOLOGY

ZIMMER GROUP DEVELOPS INNOVATIVE METAL, WOOD AND COMPOSITE MATERIAL PROCESSING TOOL SYSTEMS FOR ALL INDUSTRIES. NUMEROUS CUSTOMERS CHOOSE US AS THEIR SYSTEMS AND INNOVATION PARTNER.

Knowledge and experience. Industry knowledge and a decades-long development partnership in exchangeable assemblies, tool interfaces and systems make us bound for new challenges around the world.

Components. We deliver numerous standard components from stock and develop innovative, customized systems for OEM and end customers – far beyond the metal and wood processing industries.

Variety. Whether you have machining centers, lathes or flexible production cells, the power tools, holders, assemblies and drilling heads of Zimmer Group are ready for action.

SYSTEM TECHNOLOGY

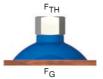

ZIMMER GROUP IS ONE OF THE LEADING SPE-CIALISTS IN THE DEVELOPMENT OF CUSTOM-IZED SYSTEM SOLUTIONS WORLDWIDE.

Customized. A team made up of more than 20 experienced designers and project engineers develop and produce customized solutions for special tasks in close collaboration with end customers and system integrators. It doesn't matter if it is a simple gripper and handling solution or a complex system solution.

Solutions. These system solutions are used in many industries, from mechanical engineering to the automotive and supplier industries to plastics engineering and consumer goods industries, all the way to foundries. The Know-how Factory helps countless companies to thrive competitively by increasing automation efficiency.

SUCTION CUPS RANGE SELECT THE RIGHT SUCTION CUPS

CALCULATIONS FOR THE EXAMPLE ARE CARRIED OUT BY FOLLOWING DATA:

Suction Plate round

Work piece

Material: Steel sheet stacked
Surface: smooth, plane, dry
Dimensions: Length max. 3000 mm
Width max. 1000 mm

Thickness max. 2.0 mm
Weight approx. 47 kg

Handling system

Implemented system: Portal converter

Present compressed-air: 8 bar Control voltage: 24 V DC

Process flow: Implement horizontal-horizontal

Maximum acceleration: X-, Y-Axis: 5 m/s2

Z-Axis: 5 m/s2

Cycle time: 30 s

Required time: for suction: <1 s

for depositing: <1 s

Torus Vacuum Cup

How much does your work piece weigh?

► For further calculations, it is significant to know which weight [m] your work piece has. You can calculate this by means of following formula:

L = Length [m]

B = Width [m]

H = Height [m]

p = Density [kg/m³]

Mass m [kg]: $m = L \times B \times H \times p$

Example: $m = 3.0 \times 1.0 \times 0.0020 \times 7850$

m = 47.1 kg

How much load can the vacuum gripper carry?

➤ For calculating the holding force we need the weight. Additionally, the vacuum grippers have to apply acceleration forces which must not be neglected in a fully automatic system. To simplify the calculation three important and most frequent existing load cases are represented and described.

Significant

In the following simplified diagram about load cases I, II, III, the most unfavourable load case with the highest theoretical holding force has to be used or further calculations.

Bellows Cup oval

LOAD CASE I - VACUUM GRIPPER HORIZONTAL, FORCE VERTICAL

FTH = theoretical holding force [N]

m = mass [kg]

g = Gravitational acceleration [9.81 m/s2]

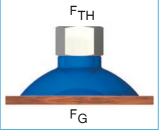

a = Acceleration [m/s2] of the plant (Emergency stop!)

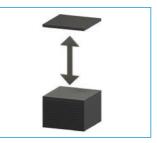

Security (minimum value 1.5-fold security, for critical, inhomogeneous or porous material or rough surface 2.0)

FTH = m x (g + a) x S

Example: $FTH = 47.1 \times (9.81 + 5) \times 1.5$

FTH = 1046 N

Vacuum grippers are horizontally on the top of the work piece which can be lifted.

SUCTION CUPS RANGE SELECT THE RIGHT SUCTION CUPS

Suction Plate oval

LOAD CASE II- VACUUM GRIPPER HORIZONTAL, FORCE **HORIZONTAL**

FTH = theoretical holding force [N]

= mass [kg] m

= Gravitational acceleration [9.81 m/s2] g

= Acceleration [m/s2] of the plant (Emergency stop!) а

= Friction coeffi- = 0.1 for oily surfaces cient

= 0.2 ... 0.3 for wet surfaces

= 0.5 for wood, metal, glass,

stone, ...

= 0.6 for rough surfaces

Attention! The indicated friction coefficients are averaged values and have to be checked for each work piece!

Security (minimum value 1.5-fold security, for crits ical, inhomogeneous or porous material or rough surface 2.0)

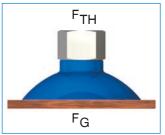

Vacuum Cups

FTH = $m \times (g + a / \mu) \times S$

 $FTH = 47.1 \times (9.81 + 5 / 0.5) \times 1.5$ Example:

FTH = 1400 N

Vacuum grippers are fitted horizontally on a work piece which should be side-moved.

LOAD CASE III - VACUUM GRIPPER VERTICAL, FORCE VERTICAL

FTH = theoretical holding force [N]

m = mass [kg]

g = Gravitational acceleration [9.81 m/s2]

a = Acceleration [m/s2] of the plant (Emergency stop!)

μ = Friction coeffi- = 0.1 for oily surfaces cient

= 0.2 ... 0.3 for wet surfaces

= 0.5 for wood, metal, glass,

stone, ...

= 0.6 for rough surfaces

Attention! The indicated friction coefficients are averaged values and have to be checked for each work piece!

s = Security (minimum value 2.0-fold security, for critical, inhomogeneous or porous work pieces or rough surfaces 2.0 also higher)

Knobbed Vacuum Cups

According to the task of the sample calculation, the load case III shouldn't be considered. Metal sheets should only be used horizontally lying.

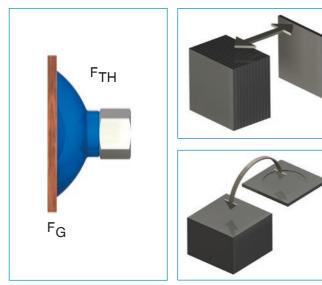

Comparison:

The results of load cases I and II are compared and a maximum value is yielded. Value for FTH = 1400 N from load case II.

FTH = $(m / \mu) \times (g + a) \times S$

Example: FTH = $(47.1 / 0.5) \times (9.8 + 5) \times 2$

FTH = 2790 N

Vacuum grippers are fitted vertically or horizontally on a work piece which should be moved vertically respectively rotated

COMPENSATION MODULES OVERVIEW OF SERIES

The ideal situation of suction application is a flat surface. In many cases this doesn't exists in practice. To adjust the suction cups axial and radial to the conditions of the suction process, axial adjustment elements are needed. Those elements assure an optimal fit of the suction cups even at work pieces with free formed surfaces. So, the highest possible suction power is reacted.

Suction cups being equipped with a sprung compensating element have the advantage that the suction cups touch the work piece advanced, before the handling device reaches its end position. This allows a higher cycle time due to the fact that the vacuum can be generated before the end position is reached. Furthermore, spring plungers are damping the fitted joints and are compensating differences in level which can arise from indefinable depositing positions respectively collecting positions. If Suction cups with a not rotation-symmetrically shape are used, spring plungers with rotation protection devices are preferred.

In combination with ball joints, spring plungers can compensate additional angle errors. Such a combination is applied if pliable work pieces are dealt with. In such cases, the ball joints prevent that the suction cups tears before or after lifting the hanging work piece. A further application are the work pieces with inclined plane where the ball joints guarantee the ideal alignment of the suction cups If the work piece has to be additionally adjusted after the suction process, an element has to be applied SAG. This angular alignment readjusts automatically into its starting position by using a rubber-metal unit as a joint.

VACUUM GENERATORS COMPACT EJECTORS

The units of the series KEM and KE are equipped with an integrated valve technology. They posses beside the normally open suck valve [1] also an normally closed exhaust valve [2] which guarantees a process secure releasing of the suction cups from the work piece.

Furthermore, the process security is increased while using integrated vacuum switches [3], which have an optional electronic (NOE) or digital design (NOD). This switch serves for controlling the vacuum and can also contribute in combination with the automatic air saver to reduce significantly operating expenses.

The filter unit [5] prevents the intrusion of foreign particles into the ejector and therefore, increases the service life of the unit.

The muffler [4] serves for noise reduction of the compact ejectors. It is especially advisable if several ejectors are used. They can be mounted parallely on an adapter plate which also is available optionally.

The exact selection of an appropriate vacuum generator for your specific application depends on various factors. The amount and size of the suction cups as well as the features and conditions play a vital role of the handling work piece.

The following table makes it easier to select the suitable ejector and it shows the required suction capability depending on the suction diameter. The specified values are applied per suction cups and for smooth, vacuum sealed material. For porous, coarsely porous or rough surfaces generally tests should be carried out to determine the suction capability.

 Pumping speed vs diameter of the suction cup Suction cup Ø Pumping speed Vs up to 60 mm $0.5 \, \text{m}^3/\text{h}$ up to 120 mm 1,0 m³/h

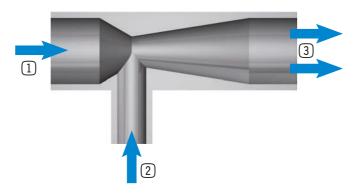

The ejectors of the series KE allow the application of the optional available automatic air saver. In connection with the vacuum switch, which is installed in the ejector, a customer-specific defined vacuum range (hysteresis) is controlled and regulated. This control allows a reduction of the air to a multiple compared to conventional-controlled ejectors (see graph). Due to the fact that the ejector does not permanently generates vacuum, but only if the pre-set threshold is under-run.

Compressed-air consumption Without automatic air save With automatic air saver

8.3 I/min

16,6 l/min

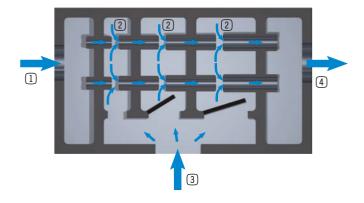

VACUUM GENERATORS VENTURI NOZZLE AND MULTI-STAGE EJECTORS

VENTURI NOZZLE

The venturi principle cannot only be found in compact ejectors but also in in-line vacuum generators VGM and VG as well as in the adapter series SAV and FV.

According to the venturi principle, the fitted nozzle [1] in the ejector aims to conduct compressed air. With the reduction of the diameter in the interior the streaming air accelerates. Thus, a vacuum arises at the die exit [2]. Compressed air and sucked back ambient air are released via the exhaust air [3]. The generated vacuum is in relation to the used compressed air.

MULTI-STAGE EJECTORS

In addition to the single-stage venturi principle, multi-stage ejectors are implemented for vacuum generators of the series VIP. In this option, multiple venturi nozzles are connected in series. With the connection [1,] compressed air is conducted into the ejector and streams through the fitted nozzles [2]. The arising vacuum sucks air via the vacuum connection [3]. The vacuum capacity of single nozzles is added in this way. The result is a much higher pumping speed compared to single-stage ejectors. Compressed air and sucked ambient air are released via the exhaust air [4].

SENSING UNITS OVERVIEW OF SERIES

To guarantee a secure operation of the vacuum circuit, measuring equipment and control devices are inevitable. These components have to meet highest quality requirements so that ejectors and suction cups fulfil their tasks perfectly. Thus, vacuum switches and vacuum controllers play an essential role.

Components for system monitoring can be found in all areas of automated handling processes. No matter if automotive or plastics industry or other applications where process reliability needs to be increased, sensing units are required.

Due to their high switching accuracy and switching frequencies, electronic vacuum switches suit applications where a long life-time and high precision is the priority. Further benefits of the electronic switch are their small size and increased ease of use. Different parameters can be programmed and evaluated via plastic foil keyboard and LCD display. Vacuum switches can be used within a measuring range of -1 to 0 bar.

With mechanic adapters of series SAV / SAM it is possible to integrate a compact and simple work piece identification. Via a plunger and a proximity switch the work piece availability can be monitored.

► SERIES VS003E

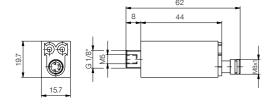

Special features

Electronic vacuum switch

Switching point and hysteresis adjustable

Analog and digital outputs

	► Technical Data
Order no.	VS003E-E2
Measuring medium	non-aggressive gases; dry, oil-free air
Measuring range [bar]	-10
Max. safe overpressure [bar]	5
Repetition accuracy [%]	+/- 1% from measuring range
Hysteresis	Adjustable: 3-25% of the set value
Output signal	1 analog 15V / 1 digital
Switching capacity [mA]	125
Response time [ms]	5.0
Status indication	LED
Electrical connection	Connector M8, 4-pole
Connection media	G1/8" -AG + M5-IG
Voltage [V DC]	10.8-30
Current consumption [mA]	30
Degree of protection [IP]	40/65 (with tube)
Temperature deviation	+/- 3% from measuring range
Allowable ambient temperature [°C]	0.,.50
Weight [kg]	18

► SERIES VS003D

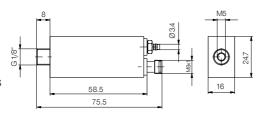

Special features

Electronic vacuum switch with digital display

Switching point and hysteresis freely programmable

Special programmable functions

Two separately programmable digital outputs

	► Technical Data
Order no.	VS003D-E2
Measuring medium	non-aggressive gases; dry, oil-free air
Measuring range [bar]	-10
Max. safe overpressure [bar]	5
Repetition accuracy [%]	+/- 1% from measuring range
Hysteresis	adjustable: 0-100% of the set value/comparator mode
Output signal	2 digital
Switching capacity [mA]	180
Status indication	2xLED
Display resolution	0.01 bar, 5 mmHg, 0.2 inHg, 1 kPa
Displayed units	bar, mmHg, inHg, kPa
Displayed value	3-digital 7-segment LED
Electrical connection	Connector M8, 4-pole
Connection media	G1/8" -AG + M5-IG
Voltage [V DC]	10.8-30
Current consumption [mA]	30
Degree of protection [IP]	40/65 (with tube)
Temperature deviation	+/- 3% from measuring range 0-50°C
Allowable ambient temperature [°C]	0.,.50
Weight [kg]	25

HANDLING COMPONENTS **OVERVIEW OF SERIES**

In vacuum handling applications, not only the suction cups which touch the work piece play an important role, but also the downstream handling components. With the combination of these standardized products, suctions cups can be used more efficiently. Thus, they increase the value added in the process.

With the short stroke cylinders of the SH and SHD series, a linear movement of the suction cup is possible, which even can be sensed at the final position. With the integrated venturi nozzle and the simple connection of the suction cups of connection type 1 and 2, the short stroke cylinders can be integrated into the application with a great benefit at little costs. The corresponding nozzles are available as accessory.

Retractable axes of the series SWM were developed for removal handling. An increased torque at the end positions quarantees highest process security while removal of the work pieces. The end position of a 90° tilting can be detected / monitored via magnetic field sensors.

To enhance the rationality of expensive production machines, a flexible production process has to be ensured. This can be realized by the tool changers of the series HWR with an integrated fluid. They guarantee a fast and low-cost changing of various vacuum grippers without any additional tool. Optionally available energy elements allow additionally the transmission of electrical signals.

MCS MODULAR CONSTRUCTION SYSTEM **OVERVIEW OF SERIES**

With the modular construction system MCS (Modular Construction System), a specific work piece solution can be found without any additional design effort. This can be done by the compatible single components. So, you can find profiles [2], compensating elements [5], and suction cups holders [6] in our product portfolio as well as gripper fingers [1] which are guaranteeing a firm grip of the work piece during the transportation.

The MCS is applied, where a low-cost but robust solution is required. The special feature of the system is its low weight compared to a conventional steel construction. So, a complex system can be designed or assembled at the workbench with no trouble.

In short, the more complex a work piece, the more benefits the MCS offers with regard to the cost incurred.

The MCS can be applied to various areas of handling components. The MCS is used for robot solutions which focus mainly to the load of robots as well as for pick and place applications and removal handling.

For the tool changers HWR and the angle pivot units SWM [8], standardized adapter plates [4] are available which enable a simple and low-cost connection to the MCS.

Particularly this combination with other Sommer-automatic components makes the modular construction system so attractive and utmost flexible.

COVER CAP

Special features

To cover the profile section ends

	► Technical Data			
Order no.	SO-11110020	SO-11120020	SO-11120040	SO-11140040
Dimension A [mm]	10	20	20	40
Dimension B [mm]	20	20	40	40

▶ CROSS CLAMP

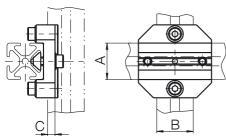

Special features

On both sides, the profiles are inserted into a groove. So a very high angle stability is ensured

Releasing the fixing on one profile side, the profile can be moved parallelly and set

The profile may be shifted in parallel and adjusted by loosening the mount on one side of the profile

USAGE NOTE GENERAL

The contents of this catalog are not legally binding and are intended solely for informational purposes. Any final agreement will be in the form of a written order confirmation from Zimmer GmbH, which occurs only subject to the respective current General Terms and Conditions of Sale and Delivery of Zimmer GmbH. These can be found online at **www.zimmer-group.com.**

All of the products listed in this catalog are designed for their intended use, e.g. machines for automation. The recognized technical regulations for safety and professional work must be followed for use and installation.

Furthermore, the respective laws, guidelines from TÜV, guidelines from the respective trade association and VDE stipulations shall apply.

The technical data listed in this catalog must be observed by the user. The conditions of use may not fall below or exceed the specified data. If information is missing, it cannot be assumed that there are no upper or lower limits or no limitations for specific use cases. Consultation is required in these cases.

Disposal is not included in the price, which would have to be taken into account accordingly in the event of return to or disposal by Zimmer GmbH.

TECHNICAL DATA AND FIGURES

The technical data and figures have been compiled with great care and to the best of our knowledge. We cannot guarantee that the information is up to date, correct or complete.

The specifications and information—such as figures, drawings, descriptions, dimensions, weights, materials, technical and other performance data and the described products and services—contained in general product descriptions, Zimmer GmbH catalogs, brochures and price lists in any form are subject to change and may be modified or updated at any time without prior notification. They are binding only to the extent expressly specified in a contract or order confirmation. Slight deviations from such descriptive product information shall be considered approved and shall not affect fulfillment of agreements insofar as they are reasonable for the customer.

LIABILITY

Products from Zimmer Group are subject to the German Product Liability Act. This catalog does not contain any guarantees, assurances of quality or procurement agreements for the products it depicts, neither expressly nor implied, including for the availability of products. Advertising statements relating to quality features, properties or applications for the products are not legally binding.

To the extent permitted by law, Zimmer GmbH is exempt from any liability for direct or indirect damage, subsequent damage and requests of any kind or on any legal basis resulting from the use of information contained in this catalogue.

TRADEMARK, COPYRIGHT AND REPRODUCTION

The depiction of commercial property rights in this catalog—such as brands, logos, registered trademarks or patents—does not include the granting of licenses or use rights. Their use is not permitted without the expressed written agreement of Zimmer GmbH. All contents of this catalog are the intellectual property of Zimmer GmbH. For the purposes of copyright, any unlawful use of intellectual property, including excerpts, is prohibited. Reprinting, copying or translating (including in the form of excerpts) are permitted only with the prior written consent of Zimmer GmbH.

STANDARDS

Zimmer Group has a quality management system certified in accordance with ISO 9001:2008. Zimmer Group has an environmental management system certified in accordance with ISO 14001:2004.

DECLARATION OF INCORPORATION IN TERMS OF THE EC DIRECTIVE 2006/42/EC ON MACHINERY (ANNEX II 1 B)

We hereby declare that our elements meet the following basic requirements of the Machinery Directive 2006/42/EC as an incomplete machine

No.1.1.2., No.1.1.3., No.1.1.5., No.1.3.2, No. 1.3.4, No. 1.3.7, No.1.5.3, No.1.5.4, No.1.5.8., No.1.6.4, No.1.7.1, No.1.7.3, No.1.7.4.

We also declare that the specific technical documents were produced in accordance with Annex VII Part B of this Directive. We undertake to provide the market supervisory bodies with electronic versions of the incomplete machine's special documents via our documentation department should they have reason to request them.

The incomplete machine may only be commissioned if the machine or system in which the incomplete machine is to be installed has been determined to satisfy the conditions of the Machinery Directive 2006/42/EC and the EC Declaration of Conformity has been produced in accordance with Annex II A.
